

Data Collection and Preprocessing Phase

Date	20 October 2024
Team ID	739652
Project Title	Ai-Powered Nutrition Analyzer For Fitness Enthusiasts
Maximum Marks	6 Marks

Preprocessing Template

Preprocessing involves preparing data for analysis by cleaning, transforming, and organizing it. Steps include handling missing values, normalizing data, encoding categorical variables, and ensuring consistency and accuracy. It enhances the quality and usability of data for machine learning and other analytical tasks.

Section	Description
	Provides a summary of key nutritional data, including macronutrients, micronutrients, and dietary preferences.
Data Overview	
	Adjusts input data dimensions to fit specific fitness goals, such
	as meal plans, portion sizes, or dietary trends.
Resizing	
	Standardizes data by converting all nutritional values into a
Normalization	common scale, ensuring consistent comparisons.

	Enhances nutritional data through techniques like generating	
	variations of meal plans using healthy substitutions.	
	variations of fical plans using ficaltity substitutions.	
Data Augmentation		
	Removes noise from nutritional data, such as irrelevant	
	ingredients or incorrect quantities, for improved accuracy.	
-	ingredients of meofreet quantities, for improved decardey.	
Denoising		
	Extracts key nutrients or combinations, like protein-carbohydrate	
	ratios or vitamins-minerals combinations.	
Edge Detection		
Edge Detection		
	Converts in surdient data into embeddings (s. s. Nistrient	
Color Space Conversion	Converts ingredient data into embeddings (e.g., Nutrient	
1	Embeddings) for richer analysis.	
	Trims meal data to include only necessary components, such as	
	primary ingredients or essential macros.	
Image Cropping		
	Normalizes nutritional data frequencies for balanced meal	
	proportions, e.g., protein, carbs, fats percentages.	
Batch Normalization		
Data Preprocessing Code Screenshots		
	x_train = train_datagen.flow_from_directory(r'/content/drive/MyOrive/TRAIN_SET/TRAIN_SET/, target_size=(64, 64), batch_size=5,color_mode='rgb',class_mode='sparse') x_test = test_datagen.flow_from_directory(r'/content/drive/MyOrive/TRAIN_SET/TEST_SET', target_size=(64, 64), batch_size=5,color_mode='rgb',class_mode='sparse')	
Loading Data		
Loading Data		

	<pre>classifier = Sequential() classifier.add(Conv2D (32, (3, 3), input_shape=(64, 64, 3), activation='relu') classifier.add(MaxPooling2D(pool_size=(2, 2))) classifier.add(Conv2D (32, (3, 3), activation='relu')) classifier.add(MaxPooling2D(pool_size=(2, 2))) classifier.add(Flatten())</pre>
Data Preprocessing	
	classifier.add(Dense (units=128, activation='relu')) classifier.add(Dense (units=5, activation='softmax'))
clean the comment _text in both the datasets. & training and testing	
	train_datagen=ImageDataGenerator(rescale=1./255,shear_range=0.2,zoom_range=0.2,horizontal_flip=True)
Train _test_ split	test_datagen=ImageDataGenerator(rescale=1./255)
Loading the pickle file	classifier.save('nutrition.h5')
